PROFESSIONAL SUMMARY

Results-driven Full Stack Software Engineer currently contributing to digital transformation initiatives at Deloitte, assigned to the Eli Lilly client project in Bangalore. Own end-to-end development of high-impact applications, leading both frontend (React.js) and backend (Node.js, Python) components while architecting and deploying scalable APIs on AWS (Lambda, API Gateway, AWS SAM, Postgres, S3, AWS Glue, Cloudformation).

Proven expertise in delivering performant, secure, and user-centric solutions through modern state management (Redux, React Query), complex API integrations (including OpenAI/ChatGPT), and robust CI/CD pipelines. Previously at Turtl, optimized web and mobile application performance using React.js, React Native, Node.js, and Python Flask, establishing a strong foundation in clean code, responsive design, and accessibility.

Thrive in client-facing Agile environments, mentoring team members, conducting code reviews, and aligning technical solutions with business and client objectives. Eager to apply this full-stack experience and client delivery focus to new, high-impact projects within Deloitte.

SKILLS

- **Programming Languages:** JavaScript (ES6+), TypeScript, Python (Boto3, Flask, Fastapi)
- **Front-End Development:** React.js, React Native, HTML5, CSS3, Tailwind CSS, Styled Components
- **Back-End Development:** Node.js, Python Flask, Python Fastapi, Python sqlalchemy, Prisma ORM, Nodejs Sequelizer
- **State Management:** Redux, React Context API, React Query
- **Databases:** DynamoDB, MySQL, PostgreSQL, Redis, MongoDB
- **Cloud Platforms & Services:** AWS: Lambda, API Gateway, EC2, S3, Cognito, DynamoDB, CloudWatch, CodeCommit, CodeBuild, CodePipeline, AWS CDK (Cloud Development Kit), AWS SAM, AWS Glue
- **API Development & Integration:** RESTful APIs, GraphQL, third-party APIs, ChatGPT API, data fetching and caching (React Query, Axios)
- **Mobile Development:** Cross-platform app development with React Native, React Native Expo
- **Infrastructure as Code:** AWS CDK, AWS SAM, Cloudformation template, Terraform
- **Version Control:** Git, GitHub, AWS CodeCommit
- **DevOps & CI/CD:** AWS CodePipeline, CodeBuild, automated deployment pipelines using github actions.
- **Monitoring & Logging:** AWS CloudWatch, Cloudtrail performance monitoring tools
- **Testing Frameworks:** Jest, React Testing Library
- **Performance Optimization:** Chrome DevTools, Lighthouse, database, and API optimization
- **Agile Practices:** Scrum, Sprint Planning, code reviews, Jira tickets, confluence documentations
- **Storage Solutions:** S3 (object storage), Redis (in-memory storage)
- **Machine Learning (AI):** Pandas, Numpy, ML algorithms, NN, OpenAI, Claude-code, Olama
- **UI/UX implementation:** Pixel-perfect designs, accessibility standards (WCAG) compliance

EXPERIENCE

Full Stack Software Engineer

June 2025 - Current

Deloitte India ([Eli Lilly](#) Client Engagement) | Bengaluru, India

Tech-stacks or Tools: *React, NodeJS, Sequelizer, Python, SqlAlchemy, Javascript, Typescript, RDS, AWS(Lambda, API-gateway, Cloudwatch, Cloudtrail, Cloudformation, TextTract, OpenAI-API integration, S3, AWS-Glue, Lambda layers) CI/CD pipelines*

Project - 2: CSA-Launchpad:

- Implemented Single Sign-On (SSO) authentication integrated with Azure AD groups, aligning application access with Eli Lilly enterprise security policies.
- Developed frontend and backend authentication flows, including secure redirects, session handling, and cookie-based authentication mechanisms.
- Managed user session persistence using DynamoDB and configured environment-specific deployments across Dev, QA, and Production branches
- Implemented role-based access control (RBAC) using distribution list (DL) mappings to enforce secure and scalable authorization workflows.
- Configured S3 object lifecycle and TTL policies to automate secure document retention and cleanup processes.
- Built AI-powered document processing workflows using AWS Textract and OpenAI APIs to extract, classify, and validate uploaded documents against custom business rules.
- Collaborated with cross-functional teams to support secure enterprise integrations and improve platform compliance capabilities.
- Designed and integrated paginated RESTful APIs using Node.js and React.js, enabling efficient retrieval, rendering, and management of large datasets for power-user workflows.
- Implemented React.js UI components based on Figma designs, ensuring responsive and pixel-perfect interfaces aligned with business requirements.
- Collaborated within a large Agile team environment, contributing to feature delivery, debugging, and production support activities.

Project - 1: GT-Connect:

- Developed end-to-end full-stack development for Eli Lilly's GT-Connect project, leading frontend (React.js) and backend (Node.js, Python) while leveraging AWS services to deliver high-performance, compliant features supporting business-critical pharmaceutical workflows.
- Designed and developed RESTful APIs using Node.js and Python, seamlessly integrating them with React.js frontend to enable efficient data flow and enhanced application functionality.
- Proposed and supported the adoption of superior architectural patterns over existing ones, resulting in improved system performance, easier scalability, and reduced technical debt.
- Refactored task-processor from AWS Lambda to AWS Glue Jobs, enabling handling of heavier, compute-intensive tasks with improved scalability and cost efficiency.
- Implemented long-polling and efficient data-fetching mechanisms in the React.js frontend to support seamless handling of large datasets and heavy usage scenarios.
- Enabled secure file uploads to Amazon S3 by generating pre-signed URLs, ensuring data integrity and compliance in a regulated pharmaceutical environment.
- Enhanced user interface by developing responsive, intuitive components using React.js and Material-UI, improving usability and overall user experience.
- Strengthened application security by configuring and managing Dependabot alerts and vulnerability checks, ensuring timely remediation of dependencies.
- Collaborated with backend engineers to resolve data inconsistencies, recommending and implementing composite keys in middleware queries to ensure accurate database updates.
- Identified query performance bottlenecks and collaborated with data engineers to implement targeted indexes, reducing response times and enhancing application efficiency.
- Partnered with business stakeholders to understand requirements and propose technical solutions, delivering features that directly addressed key operational challenges.

Full Stack Software Engineer

February 2023 - May 2025

[Turtill](#) | Hyderabad, India

Tech-stacks or Tools: *Python, TypeScript, Boto3, Fast-api, Flask, Terraform, AWS(Serverless), API-Gateway, Lambda, DynamoDB, RDS, EC2, Cloud-watch, code-commit, code-deploy, CICD, NodeJS, Express, Rest-API, Cognito, Batch-writes*

- Developed scalable web applications using modern frameworks and technologies, enhancing user experience and reducing page load time by 30%.
- Architected RESTful APIs to handle high-traffic requests efficiently, ensuring seamless integration between front-end and back-end systems.
- Led the migration of legacy systems to cloud-native solutions, leveraging AWS services to improve application reliability and scalability.
- Implemented advanced data security protocols, including encryption and authentication, ensuring compliance with industry standards.
- Optimized database queries to enhance performance, achieving up to 40% reduction in query execution time and improving overall application responsiveness.
- Collaborated with cross-functional teams, including designers and product managers, to deliver high-quality software solutions aligned with business objectives.
- Mentored junior developers, fostering a knowledge-sharing culture and ensuring adherence to coding standards and best practices.
- Automated CI/CD pipelines, reducing deployment time by 50% and enabling faster rollouts of new features.
- Conducted rigorous code reviews to maintain code quality and reduce production bugs by 25%.
- Designed and implemented user-centric features, increasing customer retention by leveraging feedback loops and analytics.

Software Developer

April 2022 - February 2023

[Lobb Logistics](#) | Bengaluru, India

Tech-stacks or Tools: *TypeScript, React, React-Native, React-Native-Expo, Tailwind-css, HTML5, CSS3, Material-UI, React-Query, Redux, React-Hooks, React-Router, webpack. hosting & re-mapping to custom-domain*

- Developed cross-platform mobile applications using React Native, ensuring consistent functionality and performance across Android and iOS platforms.
- Integrated third-party libraries and APIs to enhance app features and deliver seamless user experiences.
- Optimized app performance by identifying bottlenecks and implementing efficient code practices, reducing app load time by 40%.
- Implemented responsive UI designs, adhering to pixel-perfect layouts and improving user satisfaction through intuitive navigation.
- Collaborated with back-end teams to design robust APIs, ensuring smooth data flow and synchronization between front-end and back-end systems.
- Maintained and upgraded existing applications, adding new features while ensuring backward compatibility and stability.
- Resolved production issues through debugging and troubleshooting, reducing app crash rates by 25%.
- Worked with Agile methodologies, actively participating in sprint planning, code reviews, and retrospectives to ensure timely delivery of features.
- Integrated push notifications and in-app messaging systems, driving user engagement and retention by up to 30%.
- Stayed updated with emerging trends in mobile development, adopting modern tools and practices such as React Native CLI, Redux, and TypeScript.

Software Engineer

May 2021 - March 2022

[Wipadika Innovations](#) | Bengaluru, India

Tech-stacks or Tools: *JavaScript, React, React-Native, React-Native-Expo, Tailwind-css,*

HTML5, CSS3, Material-UI, React-Query, Redux, React-Hooks, React-Router, Deploying to Android & IOS app-stores, Sentry, Firebase, Crashlytics

- Built dynamic and responsive web applications using React.js, ensuring seamless performance across various devices and browsers.
- Implemented state management solutions with Redux and React Context API to efficiently handle complex application states and improve maintainability.
- Optimized data fetching and caching using React Query, enhancing application responsiveness and reducing server load by 35%.
Developed reusable and modular components using TypeScript, improving code readability, scalability, and reducing bugs by 40%.
- Designed and implemented UI/UX features with HTML5 and CSS3, adhering to accessibility standards (WCAG) to ensure an inclusive user experience.
- Enhanced code quality by adopting modern JavaScript ES6+ features, leading to cleaner, more maintainable, and performant applications.
- Integrated APIs with React and TypeScript, ensuring type safety and robust error handling for seamless communication between front-end and back-end.
- Implemented responsive web designs, leveraging CSS frameworks like Tailwind CSS or styled-components to deliver a consistent user experience across devices.
- Conducted performance optimizations using Lighthouse and Chrome DevTools, achieving up to a 30% improvement in page load speeds.

Project Executive

September 2018 - January 2020

[Caritor Solutions](#) | Bengaluru, India

Tech-stacks or Tools: *Python, pandas, numpy, flask, plotly, matplotlib, Seaborn, Joblib*

- Performed data cleaning, preprocessing, and exploratory data analysis using Pandas and NumPy to ensure high-quality datasets for stakeholder reporting.
- Developed interactive visualizations and dashboards with Plotly, Matplotlib, and Seaborn to uncover insights and communicate findings effectively to non-technical teams.
- Created lightweight web applications with Flask to expose analytical results and interactive reports to internal users.
- Analyzed datasets to identify trends, patterns, and anomalies, delivering actionable insights that supported business decision-making.
- Obtained and analyzed basic reporting metrics.

CERTIFICATIONS & PROJECTS

AWS Solutions Architect - UDEMY

- Gained ability to design scalable, resilient, and cost-effective cloud architectures using AWS services like EC2, S3, Lambda, and RDS.
- Gained expertise in optimizing cloud infrastructure performance and cost-efficiency while aligning with business & technical requirements.
- Developed a strong understanding of cloud security, governance, and compliance best practices to ensure robust and secure cloud solutions.

Machine Learning Intern (ML) - KPMG

- Gained hands-on experience in machine learning algorithms and data analysis.
- Worked on real-world projects to build predictive models and data-driven solutions.
- Enhanced skills in Python, data preprocessing, and model evaluation techniques.

Data Science Intern - ExcelR

- Developed data analysis and visualization skills using Python and Excel.
- Applied statistical methods to clean, process, and interpret large datasets.
- Gained practical experience in building machine learning models and generating insights..

EDUCATION

Bachelor of Engineering (B.E) - Electrical & Electronics Engineering

August 2018

Acharya Institute of Technology, Bengaluru
